What's New in BullCharts

Version 4.4 — Summary of features

Welcome to the latest revisions to Australia's BullCharts charting software. This version (4.4) runs on: Windows 7, Windows 8 (both 32-bit and 64-bit), Windows 10, and also on the older Windows XP.

The upgrade to version 4.4 includes the following key features:

1) F5 key — Manually refresh all open charts after a data download.

2) Identify charts that are using Metastock data (an asterisk with the security code in the price chart pane header).

3) Time period is abbreviated in price chart pane header.

4) Improve clarity in price chart header by displaying only share price and movement for stocks.

5) Colour of the plot line is now a bar under the security code in chart header.

6) Added a tooltip to the price chart header (hover mouse over).

7) Right hand click on a stock symbol in the header provides action options.

8) Click on symbol in chart header to "select" a price plot.

9) Add watchlist stocks as a "chart overlay".

10) Drag and drop symbols from your watchlist to overlay on the chart.

11) <Control> + <Delete> to delete all "over-layed" securities.

12) Multiple "select" available in the Layer Manager.

13) New section for Chart Overlays (in Layer Manager).

14) Toggle to hide or display Chart Overlays (in Layer Manager).

15) "What's New" is now part of the BullCharts Knowledge Base, with a Help menu option to select it.

16) "Add symbol" shortcut added to chart header (the plus sign at left).

17) Miscellaneous bug fixes.
